NÁUTICA

BUJÍAS DE ENCENDIDO Y TERMINALES SUPRESIVOS

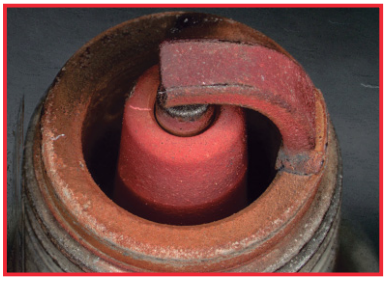

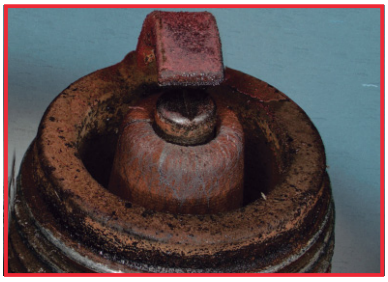

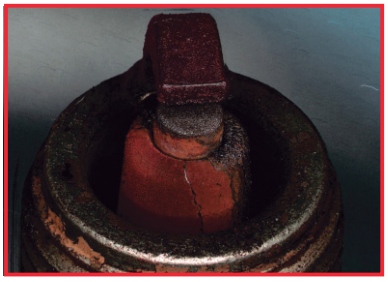

Pensou Original, usou **NGK**.

INFORMATIVO

PUNTA IGNÍFERA ROJIZA CON SEÑALES DE FUGA DE CORRIENTE

Problema (efecto):

Dificultad de arranque, falla de funcionamiento en media y alta rotación, aumento en los niveles de emisiones de contaminantes y aumento del consumo de combustible.

Causa:

Acumulación de óxidos de hierro en la punta ignífera de la bujía. Por ser conductor eléctrico, el hierro provoca la pérdida de aislación en la punta de la bujía, reduciendo la eficiencia de quema del combustible. Como el hierro queda impregnado en la superficie del aislador, no ocurre la auto limpieza de la bujía con el funcionamiento del motor.

Nota importante: El hierro no es uno de los componentes de la gasolina. Por tanto su presencia en el combustible puede haber ocurrido por un proceso de contaminación o por el uso de algún tipo de aditivo no homologado.

Solución:

1 – Substituya el juego de bujías de encendido;
2 – Verifique si el sensor de oxigeno y/o catalizador no fueron afectados también;
3 – procure abastecer con combustibles de buena procedencia.

VNI 69 00 03/13
